

CONTENTS

Papers presented

Reliable core thermal design	1
A. Amendola	
О методике расчета факторов перегрева оболочки и топлива топливных элементов быстрых реакторов	21
Н.В. Краснояр	
Consideration on safety margin in JOYO thermal design	33
T. Inoue, F. Yoshino, A. Izumi	
A simple procedure for the combination of fuel pin, sub-assembly and reactor uncertainties in fast reactor clad hot spot temperature assessment	81
D.L. Linning	
Hot-spot analysis procedures for fast reactors	85
D.L. Linning, G. McAreavey, B. Rowlinson	
The objectives of design stage hot-spot analysis	107
J.A. Gatley	
The advances statistical hot-spot analysis in gas breeder reactors	111
W.M.P. Franken	
Méthode de calcul du point chaud proposée au démarrage de Phénix	119
J. Skok	
CNEN activities on the thermal design of fast reactor fuel elements (Status report)	131
Part I: Hot channel calculations for the PEC reactor core	133
F. Amelotti, M. Barbaro, F. Spagna	
Part II: Sodium out-of-pile experiments performed at USTS/N in support of PEC fuel elements thermal design	143
P. Iannuzzo, L. Falzetti, M. Martini	
Application of hot channel analysis to KNK-II	161
H. Schäfer, W. Klassmann	
Discussion of some problems arising within the interpretation of irradiation experiments carried out in more than one reactor	189
J. Van Miegroet	
An analytical method of evaluating the effect of rod displacement on circumferential temperature and heat flux distributions — Two and three dimensional treatments	193
H. Hishida	
Effect of temperature dependency in material properties to hot spot subfactors	205
H. Hishida	
Test sample: statistical hot spot analysis for a sodium cooled fast reactor core	209
K. Doetschmann	
Summary of Session I	215
Summary of Session II	223
Summary of Session III	229
List of Participants	231
