

CONTENTS

SUMMARY OF THE SEMINAR	7
1. OVERVIEW OF LECTURES AND PAPERS PRESENTED AT THE SEMINAR	10
1.1. Technical session 1 on isolation of civil buildings and bridges from seismic and non-seismic vibrations	10
1.2. Technical session 2 on isolation of civil buildings and bridges from seismic and non-seismic vibrations	13
1.3. Panel session 1 on short presentations and discussion on future prospects for the extension of applications of seismic isolation techniques to civil buildings and bridges	15
1.4. Technical session 3 on seismic isolation of nuclear facilities	17
1.5. Technical session 4 on seismic isolation of non-nuclear industrial facilities	18
1.6. Panel session 2 on short presentations and discussion on future prospects for the extension of applications of seismic isolation to nuclear and non-nuclear industrial facilities	20
1.7. Technical session 5 on passive energy dissipation and active control of vibrations of structures	23
1.8. Technical session 6 on passive energy dissipation and active control of vibrations of structures	25
1.9. Panel session 3 on short presentations and discussion on design guidelines and codes & standards on seismic isolation and passive energy dissipation	27
2. APPLICATIONS OF THE INNOVATIVE ANTISEISMIC TECHNIQUES	29
2.1. Bridges and viaducts	29
2.2. Civil buildings	31
2.3. Non-nuclear industrial structures	33
2.4. Nuclear structures	35
2.5. Application of passive energy dissipation and oleodynamic systems	36
2.5.1. Civil buildings	36
2.5.2. Industrial structures	37
3. REMARKS ON DESIGN GUIDELINES, CODES AND STANDARDS	37
REFERENCES	39
