

CONTENTS

1. INTRODUCTION	1
2. SUMMARY	1
2A. Design Criteria	
2B. Stress Analysis – Comparison with Experiment	
2C. Strength Measurements	
2D. Creep and Fatigue	
2E. Failure Criteria	
2F. Discussion on the Franklin Institute Report	
2G. Concluding Panel Discussion	
3. PAPERS	
Criteria for the selection of graphites for HTR integral block fuel elements	7
<i>A.N. Knowles</i>	
A comparison of predicted and measured graphite moderator behaviour during 16 years operation of the Windscale advanced gas cooled reactor	21
<i>N. Prince</i>	
Analysis of nuclear graphite core components in HTRs and a critique on conventional approaches	36
<i>J.G. Willaschek</i>	
Graphite structure and its relationship to mechanical engineering design ...	42
<i>J.E. Brocklehurst, B.T. Kelly</i>	
Analysis of the stresses in a side reflector block of the pebble bed reactor	51
<i>A. Schmidt</i>	
Studies on the graphite rupture under irradiation-induced strains	62
<i>G. Jouquet, Y. Berthion, A.L'Homme</i>	
Strength of irradiated graphite: A review	69
<i>R.J. Price</i>	
Fracture mechanics applied to a reactor graphite	76
<i>M. Rodig, G. Kleist, H. Nickel</i>	
The application of fracture mechanics to the notch sensitivity of graphite	88
<i>M.O. Tucker</i>	
Strength and fatigue properties of near-isotropic graphites	96
<i>T. Oku</i>	
Irradiation creep performance of graphite relevant for pebble bed HTRs	103
<i>G. Kleist, M.F. O'Connor</i>	
A statistical fracture criterion for graphite	110
<i>H. Cords, G. Kleist, R. Zimmermann</i>	
4. AGENDA	115
5. LIST OF PARTICIPANTS	116
