

CONTENTS

INTRODUCTION	9
1. GENERAL INFORMATION	
1.1. Reactors	11
1.2. Location, postal address of station	12
1.3. Administrative and responsible authority	13
1.4. Dates of major events	18
1.5. Nominal full power	19
1.6. Coolant	19
1.7. Coolant temperature	20
1.8. Steam conditions	20
1.9. Primary circuit configuration	21
1.10. Drive fuel charge	21
2. CORE AND BLANKET LAYOUT OR GEOMETRY	
2.1. General core and blanket configurations	22
2.2. Numbers of subassemblies in the core (excluding control rods)	23
2.3. Core dimensions	24
2.4. Radial blanket dimensions	25
2.5. Axial blanket dimensions	25
2.6. Lattice pitch of components on centre plane of core	26
2.7. Fuel subassembly dimensions	26
2.8. Fuel enrichments	26
3. CORE CHARACTERISTICS	
3.1. Reference number core for which chapter 3 data apply	28
3.2. Fissile material content of core	28
3.3. Core volume fractions averaged over whole core excluding experiments	29
3.4. Power density	30
3.5. Mean length of reactor run	30
3.6. Mean length of routine shutdown for refuelling , excluding long maintenance periods	30
3.7. Burn-up	32
3.8. Neutron flux	33
3.9. Percentage of subassemblies changed at each shutdown	34
3.10. Total breeding gain	35
3.11. Breeding gain: core regions only	35
3.12. Reactivity coefficients	36

4. FUEL DESIGN AND PERFORMANCE

4.1.	Number of fuel pins per subassembly	38
4.2.	Core fuel pin dimensions and fuel density	39
4.3.	Blanket fuel pin dimensions and density of fertile column	41
4.4.	Cladding material	42
4.5.	Wrapper material	42
4.6.	Mechanical separation of pins	43
4.7.	Linear power	43
4.8.	Maximum cladding surface temperature of core fuel pin	44
4.9.	Fission product (FP) gas volume per pin	44
4.10.	Pressure of F.P.-gas in fuel pin at operating temperature and maximum bun-up	45
4.11.	Method of detecting failed pins	45
4.12.	Methods of locating failed pins	46

5. CONTROL RODS AND DRIVE MECHANISMS

5.1.	Number of safety (shut down) rods	47
5.2.	Number of regulating rods (or combined regulating and safety rods)	47
5.3.	Rapid shutdown rods	47
5.4.	Rapid additional, diverse shutdown rods	47
5.5.	Absorber pins	48
5.6.	Worth of control rod (% $\Delta K/K$)	51
5.7.	Vertical travel of control rod (mm)	52
5.8.	Rod drop time, designed (seconds)	53
5.9.	Features of drive mechanisms	54

6. HEAT TRANSPORT SYSTEMS

6.1.	Number of coolant loops	56
6.2.	Sodium inventory	56
6.3.	Coolant flow rate	57
6.4.	Coolant velocity in core	58
6.5.	Pressure drop across core	58
6.6.	Coolant temperature	59
6.7.	Piping	62
6.8.	Valving	71

7. MAIN COMPONENTS OF HEAT TRANSPORT SYSTEM

7.1.	Reactor vessel (primary tank)	72
7.2.	Main pumps	73
7.3.	Intermediate heat exchangers	81
7.4.	Steam generators	87
7.5.	Turbine generators	101

8. AUXILIARY SYSTEMS

8.1.	Coolant purification system	103
8.2.	Cover gas system	105
8.3.	Decay heat removal system	115
8.4.	Pre-heating system	117

9. SHIELDING, CONTAINMENT AND SAFETY FEATURES

9.1.	Shielding objectives (neutron and other limits at different important locations)	120
9.2.	Shielding materials	121
9.3.	Containment	123
9.4.	Additional safety features	126

10. PROTECTION AND CONTROL

10.1.	Main criteria for initiating automatic shutdown	127
10.2.	Principal shutdown systems	129
10.3.	Reactor power control	130
10.4.	Method of detection of sodium leaks	133

11. REFUELLING

11.1.	Refuelling methods	134
11.2.	Cooling during refuelling	135
11.3.	Method of identifying subassemblies and core components during handling operations	139
11.4.	Main method of removing sodium from subassemblies and core components	140

12. IN-SERVICE INSPECTION PROVISIONS

12.1.	Primary vessel and internals	141
12.2.	Primary circuit pipes	142
12.3.	Secondary circuit pipes	143
12.4.	Intermediate heat exchangers	144
12.5.	Steam generators units	145
