

THE BIG BANG - XML EXPANDING THE INFORMATION UNIVERSE

S. Rutt, M Chamberlain, G Buckley
STATS-NNC Limited, United Kingdom

Email address of main author: Stephen.Rutt@stats-nnc.co.uk

- XML is the biggest advance in Information and Documentation Management in years!
- XML is a revolutionary technology that enables incompatible systems to interoperate.
- How: via the creation of applications that cross software and system boundaries.
- Most information is produced directly in the formatted output, which effectively locks it in. It is then filed in a content repository or file system.
- What if instead:
 - You could simultaneously create structured information and data;
 - That had complete traceability and auditability;
 - Maintained the file or document structures you need;
 - Could be used like a database to update, version etc;
 - Reused for applications as diverse as engineering design, technical documentation, bids/tenders, training material, and marketing information;
 - Output and share in any format or style;
 - Was future proofed against bespoke file formats?
- Examine case studies of how it has been done in the nuclear and other hi-tech regulated industries.
- Come and explore with us how:
 - Users can create structured, styled and consistent documents/content as they simultaneously create shareable XML data.
 - The tool sets available to make XML adaptable to your enterprise environment alongside your existing word processing packages
 - How to turbo charge your content management system
 - Begin the journey to an electronic safety case with a verifiable single source repository.
 - Increase efficiency in your workforce

Come and talk to the enterprise content management experts on the STATS-NNC stand on XML's applications and ask for details on our stairway to Added Value.

Find out how to save time and money and make your information work for you!

Live demonstrations of our five information solutions (iLine) will be running throughout the exhibition. Whatever the size of your business one of our products will be suitable for you:

- iMPACS -The ultimate enterprise publishing and content management system and shared data environment. A single source for all information about all projects in a company or a business
- iNFORM - The complete content management system and shared data environment with full business process management capability.
- iNSPIRE - A fully interactive dynamic enterprise publishing suite
- iNHANCE - An intermediate web based authoring, publishing and content generation package
- iNGAGE - A start-up package for structured authoring, publishing and content generation.
