FOREWORD

This issue of the INIS Thesaurus includes all updates up to the end of January 2018. It contains a total of 31 185 descriptors, of which 22 357 are valid descriptors and 8828 are forbidden terms.

The INIS Thesaurus contains the controlled terminology for indexing all information within the wider subject scopes of the International Nuclear Information System (INIS). The International Nuclear Information System (INIS) hosts one of the world's largest collections of published information on the peaceful uses of nuclear science and technology. It offers online access to a unique collection of non-conventional literature. INIS is operated by the IAEA in collaboration with over 150 members. The terminology is intended for use in subject descriptions for input or retrieval of information in INIS, as well as in other suitable systems.

The terminology in this thesaurus has its origin in the 1969 edition of the EURATOM Thesaurus. The structure subsequently given to that terminology was the result of a systematic study performed by subject specialists at the INIS Secretariat and several Member States. Further expansion of the Thesaurus terminology was done in cooperation with the Energy Technology Data Exchange (ETDE), to incorporate wider vocabulary on all forms of energy.

ETDE was a multilateral information exchange agreement which existed from 1987 to June 2014 under the auspices of the International Energy Agency (IEA). ETDE's mandate was to exchange a wide scope of energy science and technology information among its partners, building its primary database, the ETDE World Energy Base (ETDEWEB).

The INIS Thesaurus is the result of continued editing performed as an international collaborative effort by a team of experts, with the support and cooperation of the Office of Scientific and Technical Information, U.S. Department of Energy.

Any suggestions for improvements to the present document are welcome. Comments should be sent to INIS at the following address:

PREFACE

"A thesaurus is a terminological control device used in translating from the natural language of documents, indexers or users into a more constrained 'system language' (document language, information language)". It is also "a controlled and dynamic vocabulary of semantically and generically related terms which covers a specific domain of knowledge". The INIS Thesaurus fits this definition adopted by UNESCO.[1]

The domain of knowledge covered by the INIS Thesaurus includes physics (in particular, plasma physics, atomic and molecular physics, and especially nuclear and high-energy physics), chemistry, materials science, earth sciences, radiation biology, radioisotope effects and kinetics, applied life sciences, radiology and nuclear medicine, isotope and radiation source technology, radiation protection, radiation applications, engineering, instrumentation, fossil fuels, synthetic fuels, renewable energy sources, advanced energy systems, fission and fusion reactor technology, safeguards and inspection, waste management, environmental aspects of the production and consumption of energy from nuclear and non-nuclear sources, energy efficiency and energy conservation, economics and sociology of energy production and use, energy policy, and nuclear law.

The terms in the INIS Thesaurus are listed alphabetically. For each alphabetical entry, a "word block", containing the terms associated with this particular entry, is displayed. In the word block, terms that have a hierarchical relationship to the entry are identified by the symbols **BT** for *Broader Term,* and **NT** for *Narrower Term*; terms with an affinitive relationship are identified by **RT**, for *Related Term*; terms with a preferential relationship are identified by **USE** or **SEE,** and **UF** for *Used For,* and **SF** for *Seen For*. In case of multiple **USE** relationships for a forbidden term, **all** listed descriptors should be used to index or search a given concept. In case of multiple **SEE** relationships, **one or more** of the listed descriptors should be considered for indexing or searching this concept.

A non-descriptor may refer to a descriptor that has *Narrower Terms*. Users of the INIS Thesaurus should always refer to the word block of that descriptor, to ensure that the most specific term is chosen. For all terms, only one level of *Broader Terms* is shown. If terms have additional levels of broader terms, e.g. **BT2**, **BT3**, etc., this is indicated by an asterisk, e.g. ***BT1**. Up to ten levels of *Narrower Terms* are shown for all terms. If terms have additional levels of narrower terms, such as **NT11**, **NT12**, etc., this is indicated by an asterisk, e.g. ***NT10**.

The dates printed after each descriptor indicate when the term was introduced for use in the INIS database or in ETDEWEB. If only one date is given, the descriptor was introduced in both databases at the same time. If the descriptor is **not** followed by a date, it already existed in the Thesaurus **before 30 June 1975**.

When searching for entries in the alphabetic listing, users should take note of the following Unicode collation algorithm (sort order):

	space
!	exclamation mark
"	quotation mark
#	number sign
$	dollar sign
%	percent sign
&	ampersand
'	apostrophe
(	left parenthesis
)	right parenthesis
*	asterisk
+	plus sign
,	comma
-	hyphen-minus
.	period
/	solidus

Arabic numerals 0-9
Roman alphabet A-Z

Numbers, which include single and multiple digits, are sorted by the initial digit first, e.g. the isotopes BORON 10 and BORON 19 appear before BORON 7 and BORON 9. In the same way, RUTHENIUM 100 appears before RUTHENIUM 88.

All terms, in which the first character is a number, appear before the letter A.

Additions and changes to the vocabulary of controlled terminology in the current Thesaurus are summarized in monthly updates. They are available from the INIS website (www.iaea.org/inis). These updates include the first-level broader and narrower terms, related terms, scope notes for the new descriptors, and the descriptor(s) to be used for each new forbidden term.

RT beta decay

BETA-DELAYED NEUTRONS
INIS: 1985-01-17; ETDE: 1988-10-12
*BT1 neutrons
RT beta-minus decay
RT delayed neutron precursors
RT neutron-rich isotopes

beta-delayed protons
INIS: 1985-01-17; ETDE: 2002-06-13
USE delayed protons

BETA DETECTION
*BT1 charged particle detection
RT beta dosimetry
RT beta particles
RT beta spectrometers
RT beta spectroscopy
RT electron detection
RT positron detection

BETA DOSIMETRY
BT1 dosimetry
RT beta detection

BETA II DEVICES
INIS: 1981-10-15; ETDE: 1979-03-28
This device was formerly known as 2XIIB.

BI-GAS PROCESS
2000-04-12
Bituminous coal research, inc. Process for producing intermediate or high btu gas by reaction of coal with steam in a gasifier operating at 1000-1500 psi and 3000 and 1700 degrees F in stage 1 and stage 2, respectively. The gasifier may be operated on air rather than oxygen at moderate pressures to produce a low btu gas.

carbon dioxide acceptor process
2000-04-12
Consolidation coal company process for producing high btu gas by catalytic methanation of synthesis gas. Heat for the reaction of coal and steam is supplied by reacting the carbon dioxide formed with calcined dolomite.
(Prior to July 1993, this was a valid ETDE descriptor.)

CEA-ADL DUAL ALKALI PROCESS
INIS: 2000-04-12; ETDE: 1978-06-14
Flue gas is passed through an absorption section where sulfur dioxide, chlorides, and sulfur trioxide are removed via contact with a solution of sodium salts. The sodium/sulfur salts are reacted with hydrated lime in a special 2-stage reactor to regenerate the sodium. Calcium/sulfur solids produced are separated from the liquor containing regenerated sodium compounds and disposed of. The regenerated liquor is recirculated to the absorption section.

CHROMIUM-MOLYBDENUM STEELS
1994-09-30
Steels containing Cr and Mo as main alloying elements; Cr content is higher than Mo content.
(Until November 1983 this was a valid descriptor. From November 1983 until September 1994 the concept was indexed to CHROMIUM ALLOYS, MOLYBDENUM ALLOYS and the most specific appropriate term from the STEELS hierarchy.)

COALCON PROCESS
INIS: 2000-04-12; ETDE: 1975-11-28
Low-temperature, intermediate-pressure process for hydrocarbonization of finely divided low-rank coal or high-boiling tars in a fluidized bed to produce chars, tars, and gases. It was originally designed for a subbituminous coal having high tar and potentially high phenolic yields during carbonization, but it is currently being developed for high-sulfur, high-volatile bituminous coals.

EXXON FUEL FABRICATION FACILITY
*BT1 fuel fabrication plants

EXXON GASIFICATION PROCESS
INIS: 2000-04-12; ETDE: 1976-09-14
Coal is reacted with steam in a fluidized-bed gasifier at 1500-1700 degrees F. To provide the necessary heat, a stream of circulating char is withdrawn from the gasifier and partially burned with air in a char heater to raise its temperature. The heated char is returned to the gasifier after separation from the flue gas. The product gas is a medium-btu gas suitable for methanation to sng.
*BT1 coal gasification
RT sng processes

EXXON LIQUEFACTION PROCESS
INIS: 2000-04-12; ETDE: 1976-09-14
Crushed coal is slurried with a recycle solvent, preheated to about 800 degrees F, and then pumped into the liquefaction reactor operating at about 2, 000 P.S.I. Preheated hydrogen is also added to the reactor. The product from the liquefaction reactor is sent to the separation step where gas, naphtha, recycle solvent, distillate, and heavy bottoms are separated by distillation.

INIS: 1996-07-18; ETDE: 1978-03-03
(From July 1996 to February 2008 HAFNIUM COMPOUNDS + TUNGSTATES was used for this concept.)
*BT1 hafnium compounds
*BT1 tungstates

hahn-meitner vicksi accelerator
INIS: 1993-11-08; ETDE: 2002-06-13
USE vicksi accelerator

hahnium
INIS: 1984-06-21; ETDE: 2002-06-13
USE dubnium

HAIL
BT1 atmospheric precipitations
RT ice
RT weather

haines process
INIS: 2000-04-12; ETDE: 1977-01-28
An adsorption process for desulfurization and sulfur recovery which uses alkali metal aluminosilicates.
(Prior to March 1994, this was a valid ETDE descriptor.)
USE desulfurization

HAIR
*BT1 skin
RT epilation
RT hair follicles
RT melanin

HAIR FOLLICLES
1975-09-16
BT1 animal cells
*BT1 skin
RT epithelium
RT hair

HAITI
INIS: 1988-04-15; ETDE: 1979-09-26
BT1 developing countries
*BT1 hispaniola
BT1 latin america

haizy
INIS: 2000-04-12; ETDE: 1983-03-24
(Prior to July 1985, this was a valid ETDE descriptor.)
USE haizy cyclotron

HAIZY CYCLOTRON
INIS: 1983-06-01; ETDE: 1983-07-07
Hamburg isochronous cyclotron.
UF haizy
*BT1 isochronous cyclotrons

halden heavy boiling water reactor

USE hbwr reactor

halex process
2000-04-12
(Prior to March 1996 this was a valid ETDE descriptor.)
USE purex process

HALF-LIFE
UF halftime
RT days living radioisotopes
RT decay
RT ft value
RT geiger-nuttall law
RT hours living radioisotopes
RT lifetime
RT microseconds living radioisotopes
RT milliseconds living radioisotopes
RT minutes living radioisotopes
RT nanoseconds living radioisotopes

RT years living radioisotopes

half-life (biological)
USE biological half-life

half-life (effective)
USE biological half-life

HALF-THICKNESS
Thickness of material which reduces the intensity of a beam of radiation passing through it to one-half its initial value.
BT1 physical properties
RT absorption
RT radiation length
RT radiation protection
RT radiation quality
RT shielding
RT thickness

halfbeak event
INIS: 1994-10-14; ETDE: 1977-01-10
A test made during OPERATION FLINTLOCK.
(Prior to September 1994, this was a valid ETDE descriptor.)
USE nuclear explosions
USE underground explosions

HALITE
INIS: 2000-04-20; ETDE: 1985-09-23
*BT1 halide minerals
RT evaporites
RT salt deposits
RT sodium chlorides

HALL EFFECT
RT electric conductors
RT ettingshausen effect
RT nernst effect
RT righi-leduc effect
RT shubnikov-de haas effect

hall generators
USE mhd generators
