

Dr Federica Pancotti

Technical Innovation Manager, Sogin SpA, Rome, Italy

Federica Pancotti is a Chemist with about 20 years of experience in the field of decommissioning and radioactive waste management. For the first 8 years of her career she worked at Nucleco, a leading company in the management of radioactive waste and the remediation of nuclear and industrial sites, first as a Chemical Laboratory Manager and then as Liquid Treatment Plant Manager.

In 2011 she moved to Sogin where she started working in the Engineering Department as responsible for Chemical and Process Unit. In 2016 she became responsible for the Technological Innovation Area. In this role she is involved into the identification, in a national or international scenario, of innovative approaches and solutions to apply new technologies in the Sogin decommissioning projects. She is actively involved in international Research and Innovation projects (eg. Euratom research projects: PREDIS, INNO4GRAPH, CLEANDEM, HARPERS).
