Status of Iran’s Nuclear Programme in relation to the Joint Plan of Action

Report by the Director General

1. As foreshadowed in GOV/2014/2, this report provides information on the status of the Islamic Republic of Iran’s (Iran’s) nuclear programme in relation to the “voluntary measures” that Iran has agreed to undertake as part of the Joint Plan of Action (JPA) agreed between the E3+3 and Iran on 24 November 2013. The JPA took effect on 20 January 2014, initially for a period of six months. On 24 July 2014, the duration of the JPA was extended until 24 November 2014.

2. The Agency confirms that since 20 January 2014, Iran has:

   i. not enriched uranium above 5% U-235 at any of its declared facilities;

   ii. not operated cascades in an interconnected configuration at any of its declared facilities;

---

1 The text of the JPA was communicated to the Director General by the High Representative of the European Union (EU), on behalf of the E3+3 (INFCIRC/855), and by the Resident Representative of Iran to the IAEA, on behalf of Iran (INFCIRC/856).

2 Previous reports on the status of Iran’s nuclear programme in relation to the JPA were provided in GOV/INF/2014/1 (20 January 2014), GOV/2014/10, Annex 3 (20 February 2014), GOV/INF/2014/6 (20 March 2014), GOV/INF/2014/10 (17 April 2014), GOV/2014/28, Annex 3 (23 May 2014), GOV/INF/2014/14 (20 June 2014) and GOV/INF/2014/16 (20 July 2014).

3 The extension of the JPA was communicated to the Director General in a letter from the E3/EU+3 and Iran dated 23 July 2014 (GOV/INF/2014/18, Annex).
iii. completed the dilution – down to an enrichment level of no more than 5\% \text{U-235} – of half of the nuclear material that had been in the form of UF\textsubscript{6} enriched up to 20\% \text{U-235} on 20 January 2014;\(^4\)

iv. fed 100 kg of UF\textsubscript{6} enriched up to 20\% \text{U-235} into the conversion process at the Fuel Plate Fabrication Plant (FPFP) for conversion into uranium oxide;

v. had no process line to reconvert uranium oxides back into UF\textsubscript{6} at FPFP;

vi. not made “any further advances” to its activities at the Fuel Enrichment Plant (FEP), the Fordow Fuel Enrichment Plant (FFEP) or the Arak reactor (IR-40 Reactor), including the manufacture and testing of fuel for the IR-40 Reactor;

vii. provided an updated Design Information Questionnaire (DIQ) for the IR-40 Reactor and agreed with the Agency on safeguards measures for the reactor;

viii. fed 1505 kg of UF\textsubscript{6} enriched up to 5\% \text{U-235} into the conversion process at the Enriched UO\textsubscript{2} Powder Plant (EUPP) for conversion into uranium oxide;

ix. continued its safeguarded enrichment R&D practices at the Pilot Fuel Enrichment Plant (PFEP), without accumulating enriched uranium;

x. not carried out reprocessing related activities at the Tehran Research Reactor (TRR) and the Molybdenum, Iodine and Xenon Radioisotope Production (MIX) Facility or at any of the other facilities to which the Agency has access;

xi. provided information and managed access to the uranium mine and mill at Gchine,\(^5\) to the Saghand Uranium Mine\(^6\) and the Ardakan Uranium Production Plant;\(^7\)

xii. continued to provide daily access to the enrichment facilities at Natanz and Fordow;

xiii. provided regular managed access to centrifuge assembly workshops, centrifuge rotor production workshops and storage facilities, and provided information thereon; and

xiv. provided,\(^8\) in relation to enhanced monitoring, the following:

- plans for nuclear facilities and a description of each building on each nuclear site;
- descriptions of the scale of operations being conducted for each location engaged in specified nuclear activities; and
- information on uranium mines and mills, and on source material.

---

\(^4\) As of 14 April 2014, Iran had diluted 104.56 kg of the 209.1 kg of the nuclear material that had been in the form of UF\textsubscript{6} enriched up to 20\% \text{U-235} on 20 January 2014. Since 14 April 2014, Iran has diluted an additional 3.81 kg of UF\textsubscript{6} enriched up to 20\% \text{U-235} that was previously present in cylinders as heels. A further 0.63 kg of UF\textsubscript{6} enriched up to 20\% \text{U-235} are under Agency seal at Iran’s declared enrichment facilities where it has been used as reference material for mass spectrometry. An additional 0.1 kg of UF\textsubscript{6} enriched up to 20\% \text{U-235} was contained in samples taken by the Agency. Iran undertook, by 20 July 2014, to convert the remainder of this UF\textsubscript{6} enriched up to 20\% \text{U-235} into oxide.

\(^5\) On 29 January 2014.

\(^6\) On 6 May 2014.

\(^7\) On 7 May 2014.

\(^8\) As of 20 April 2014: pursuant to Iran’s undertaking to provide this information within three months of the JPA taking effect, i.e. 20 January 2014.
3. In addition, the Agency confirms that since 24 July 2014, Iran has:

i. used about 3.5 kg of U$_3$O$_8$, converted from UF$_6$ enriched up to 20% U-235, for the manufacture of fuel items for TRR; and

ii. informed the Agency that it will dilute about 4118 kg of UF$_6$ enriched up to 2% U-235 down to the enrichment level of natural uranium.
